

FINALLY! A flight simulator that is AFFORDABLE for all Flight Schools!

Simulator Systems International **Flight Sim Ultra-X2**

Based on X-plane platform (with SSI upgrades)

16 Airplane Platforms Standard - SEL & MEL Turbo and Jet Package Available

Fully adjustable reclining seat

\$23,995⁰⁰
(FOB Tulsa - EFB Optional)

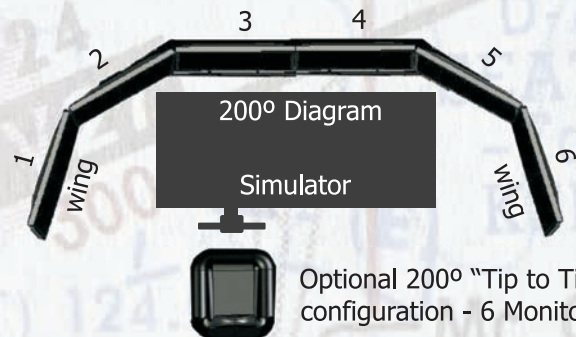

Wheel package included, portable room to room

Proudly Made in America

**some components may vary due to upgrades*

- **No Money Down! No Deposits! No Fees!**
- **Lease - No capital investment**
- **Lowers your cost per student rating**
- **One of the best warranties in the industry.**
- **Attractive leasing with super low monthly payments**
- **Fully FAA AATD (Level 3) and Transport Canada approved!**
- **Available with 200° wrap around "tip to tip" visual system**

Simulator Systems International - a full service simulation enterprise with over 25 years in the simulation industry. We supply a full product line of aviation training platforms for everything from a Cessna 152 right up to a 747-400 full flight simulator for the general and commercial airline industries. Visit us online at www.eca-ssi.com.

Safety. Simplicity. Innovation. Price.

X-2 Features and Benefits

- Designed to **generate profit and increase cash flow** for the flight school owner or CFI. Many standard features that are "optional" on our competitors.
- Per FAA regulations, the **Ultra X-2 can be used to log flight hours** for flight and instrument experience, instrument proficiency and ratings, and more
- Can be used for **Instrument Rating Currency** and parts of the **Instrument Practical Test**.
- Comes standard with **16 single and multi-engine aircraft with throttle quadrants**.
- Instrument panel and gauges are specific to each type of aircraft (visit our website)
- All **software upgrades** are done over the internet

- Scaled to Cessna 172 cockpit dimensions, the **ergonomic design is compact** and space efficient. Not a desktop!
- Operates on a single 110V outlet
- One of the best warranties in the industry

Complete - \$23,995 or \$449 per month*

(*WAC, As shown, less EFB, F.O.B. Tulsa, OK)

Same low price - Use as many hours as you like

MOTION

By adding our motion upgrade to our X-2 Flight Simulator you can add one more flight characteristic component to an already outstanding platform.

Our motion system is designed to give full pitch, roll, and yaw effect. This is done through the use of electric actuators mounted directly to the X-2 frame. The system picks up its signals from the main simulator in millisecond timing. This allows for instantaneous control response inputs directly from the simulation engine. Items such as acceleration, de-acceleration, ground roll, wheel touch-down, stall buffeting and turbulence are just a few of the motions that are simulated. This is all controlled in the settings of the simulation and requires no separate adjustments on its own.

The motion system is designed to be maintenance free. No pulleys, belts, or gears are used. No periodic adjustments or lubrication is ever needed. Being that our system uses inputs from the main simulator, no separate computers are necessary. Also being as motion actuators mount directly to the frame of the X-2 they only have a slight increase in the total footprint of the simulator.

Motion can be added to the X-2 for \$15,995.00 on initial order. It can also be added at a later date on an existing X-2 Flight Simulator for a low installation price. This means you can have a full featured FAA approved AATD with motion for under \$40,000.00 complete!!!

Have a FAA approved X2 flight simulator with MOTION for under \$40,000

Optional Electronic Flight Bag includes:

- Moving map tied to simulation with present location showing map or TAC or SEC charts. Great for training VFR pilots on dead reckoning
- Full size display FAA Approach Charts, STARS, SIDS, and airport diagrams that are up to date and current
- Real time weather forecasts/radar by site
- Ability to add any charts of your choice
- Dedicated color 15" touch screen monitor
- Full zoom and printing features

The Flight Sim Ultra X2 is an FAA-approved Level 3 Advance Aviation Training Device (AATD) with the following loggable hours by FAA regulations:

- Logged Flight Experience - 61.51(b)(3)
- Instrument Experience - 61.57(c)(1)
- Instrument Proficiency Check - 61.57(d)(1)(ii)
- Instrument Rating - Practical Test - 61.65(a)(8)
- Instrument Rating - Max 20hrs. - 61.65(e)(2)
- Private Pilot Certificate - Max 2.5hrs. - 61.109(k)(1)
- Commercial Certificate - Max 50hrs. - 61.129(i)(1)
- Airline Transport Pilot Certificate: Max 25hrs. - 61.159(a)(3)(I)
- Approved for use as limited by part 141 appendices - 141.41(b)(c)
